Experience

Qik Office

AI Product Engineer

Aug 2024 – Present

Chennai, India

Automated Meeting Bot

- Engineered and Architected an end to end bot system that joins different external platforms like Zoom, Google Meet and captures meetings on behalf of Qik Office accounting for 35% of user traffic MoM.
- Orchestrated the entire flow using **Kubernetes Jobs** ensuring concurrent recordings with 99% uptime.
- Optimized design patterns to ensure smooth UX by ensuring the bot joins within **10s** of invoking by using **Standby Jobs**

Production Infrastructure Maintenance and Management

- Managed and Maintained Production Infrastructure ensuring 99+% uptime across all **18 microservices**.
- Implemented auto-scaling via **DigitalOcean API**, provisioning new instances at **85% resource utilization** and sustaining availability

Cross Platform Application Development

- Solely responsible for building and releasing the application across different platforms like **Windows, Android, iOS** and **MacOS** using **Cordova**.
- Serves and accounts for **45% of customers** who use our application outside of web.

Browser Extension

- Built an unified web extension that allows users to interact with Qik Office from other meetings platforms like Google Meet, Zoom etc.
- This improved customer engagement by 18% in our website.

Projects

Minos | Capability-Scoped Desktop Agent Runtime

GitHub

- Built a desktop agent runtime where LLM-generated actions pass through a capability-scoped policy broker before execution on the user's system.
- Implemented checkpoint-based undo, system-of-record verification, and effect classification across filesystem, application, code-execution, and GUI actions.
- Designed a four-tier execution model with sandboxed model-generated code and a tamper-evident audit trail for admission and execution decisions.

AUTOVIZ | LangChain, FastAPI, Next.js, PostgreSQL, MongoDB, Redis

GitHub

- Built **Langchain** RAG system specialising in data visualisation and data query answering that could handle upto 100mb of structured or unstructured data

Education

St. Joseph's College of Engineering

B.Tech Artificial Intelligence and Machine Learning (GPA: 8.68 / 10.0)

Nov 2022 – May 2026

Chennai, IN

Technical Skills

Languages: Python, Java, JavaScript, SQL

Backend & APIs: FastAPI, Node.js, Express, Socket.IO, RESTful APIs, OAuth 2.0, Microservices, Event-Driven Systems

Machine Learning: PyTorch, Scikit-Learn, LangChain, Whisper, Faster-Whisper, Pyannote, LLM APIs (OpenAI, Gemini), RAG, NLP, Deep Learning

Cloud & DevOps: AWS, GCP, DigitalOcean, Docker, CI/CD (GitHub Actions), Redis, GPU Provisioning, Auto-Scaling

Databases: PostgreSQL, MySQL, MongoDB

Practices: Agile/Scrum, System Design, Git, Caching, Observability, Secure and Scalable Design
